

ZYCOO PA Endpoint Devices

Release Note

2024.10

Corresponding Version:

SW15 SC15 SH30 SL50 : v2.1.1 (v2 hardware version) /v1.3.1 (v1 hardware version)

SC10: v1.1.2

SH10: v1.0.3

SL30: v1.1.1

X10 : v2.1.2 (v2 hardware version) /v1.3.2 (v1 hardware version)

New Features:

1. Added 'SIP Keepalive' feature in **SIP Settings→SIP Account** page.
2. Added 'Second Call Handling' in **SIP Settings→Advanced SIP Settings→SIP Function Settings** page.
3. Added an 'API Authentication' toggle in **Advanced→API settings** page.
4. Added the 'Play Online Music' feature by using the 'start/stop URL play' in the **Advanced→API settings** page.

Improvements & Bug Fixes:

1. Optimized the layout of the SIP configuration interface.
2. Optimized compatibility with the ONVIF supported VMS platforms.
3. Optimized delay issues of paging.
4. Optimized music playback synchronization.
5. Fixed the reserved interface for batch upgrades.
6. Fixed an issue where excessive system logs would be cleared regularly (logs exceeding 10,000 entries will be cleared, and with a maximum of 20,000 entries kept).
7. Fixed a DHCP client program error (after endpoint device upgrades, some PoE switches failed to obtain a DHCP address).
8. Optimized network connection compatibility for the X10 paging gateway. In the Network Settings interface, a Network Interface mode option has been added, allowing the selection between 'Compatible Mode' and 'Normal Mode'. The default factory setting is 'Normal Mode'.
